Major Release with Greatly Improved Solution Creation, Management, and Reporting Capabilities

Ultimus Adaptive BPM Suite 2016, the seventh and most important release in its Version 8 family of products, contains numerous and important enhancements and new functionality that greatly improves solution creation, administration, documentation, and reporting capabilities, as well as support of new technologies.

Enhancements and features of Ultimus Adaptive BPM Suite 2016 include:

New Ultimus WebForms – Natively built into BPM Studio, this feature enables users to design new zero-footprint forms which work on any device with an HTML5 browser, without 3rd party technology prerequisites.

New Process Documentation Editor & Process Documentation in HTML – A new Process Documentation Editor, together with enhanced process information, allows to automatically generate extensive and detailed HTML format Process Solution Documentation and to define custom documentation templates.

New Process Administrator EIK – New WCF Web Service based Process Administrator EIK provides full access to Process Administrator functionality, allowing automation of admin tasks and access to Ultimus Process Administrator functionality in custom, Web-based administrative portals.

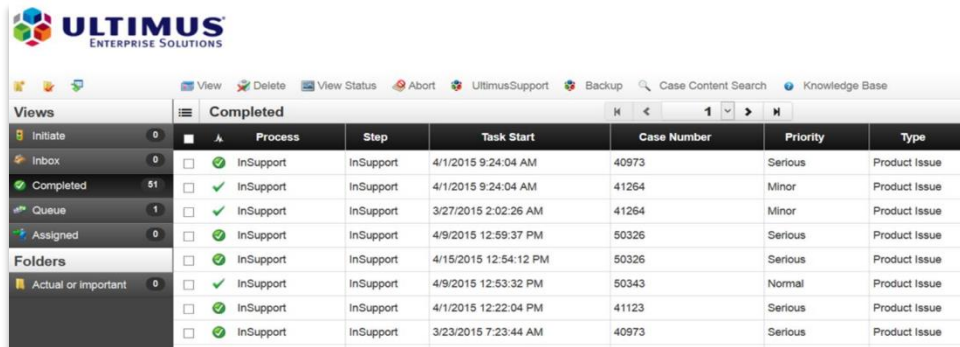

Process Administrator enhancements – New process-version independent advanced filters for Incidents and Tasks allow the administration across all versions of a process and all process data.

EIK enhancements for Ultimus OrgChart – New OrgChart EIK methods enable the creation of custom user fields.

Support for the most recent Microsoft versions – To ensure your process deployments are fully supported, Ultimus Adaptive BPM Suite 2016 also supports newer versions of Microsoft programs and technology. This includes support for Windows 10 and 8.1, IE 11, Windows Server 2012 / 2012 R2 and MS SQL Server 2014. By supporting these latest versions, V2016 allows you to protect your investment in process solutions and extend the value of your BPM initiatives.

Ultimus Adaptive BPM Suite 2016

Ultimus UATS/WebClient support – Ultimus 2016 supports Ultimus Advanced Task Service (UATS) with its end user environment, Ultimus WebClient 2015, which are available separately. This allows users to interact with their processes and tasks in a single browser-based UI dashboard with greater speed and flexibility.

The screenshot displays the Ultimus Adaptive BPM Suite 2016 interface. The top navigation bar includes options like View, Delete, View Status, Abort, UltimusSupport, Backup, Case Content Search, and Knowledge Base. The main content area shows a table of completed tasks with columns for Process, Step, Task Start, Case Number, Priority, and Type. The table lists several 'InSupport' tasks with their respective start times and case numbers.

Process	Step	Task Start	Case Number	Priority	Type
InSupport	InSupport	4/1/2015 9:24:04 AM	40973	Serious	Product Issue
InSupport	InSupport	4/1/2015 9:24:04 AM	41264	Minor	Product Issue
InSupport	InSupport	3/27/2015 2:02:26 AM	41264	Minor	Product Issue
InSupport	InSupport	4/9/2015 12:59:37 PM	50326	Serious	Product Issue
InSupport	InSupport	4/15/2015 12:54:12 PM	50326	Serious	Product Issue
InSupport	InSupport	4/9/2015 12:53:32 PM	50343	Normal	Product Issue
InSupport	InSupport	4/1/2015 12:22:04 PM	41123	Serious	Product Issue
InSupport	InSupport	3/23/2015 7:23:44 AM	40973	Serious	Product Issue

Ability to parallel login – Enhancements in user session handling give end-users the ability to login from multiple devices concurrently.

How to Upgrade

The upgrade to Ultimus 2016 should only be performed by a trained Ultimus expert. Therefore, [Ultimus is happy to assist or handle the full upgrade for you.](#)

Alternatively, if you would like to upgrade on your own, we ask that you schedule an advisory call so that we can provide you with the best possible experience with this new release. You can sign up for an advisory call at <http://www.ultimus.com/bpm-suite-upgrade>.
