## Ultimus WebClient and Mobile Advanced Task Service 2016 Focus

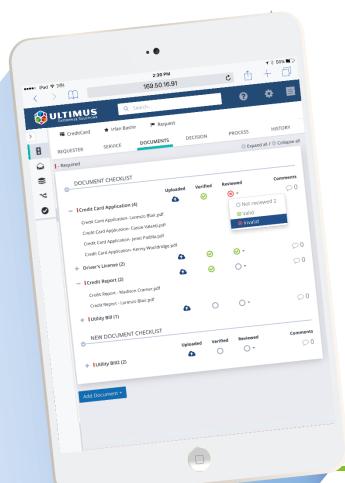

# Improved mobile capabilities let you stay connected to your business process tasks — anytime and anywhere.

With the introduction of Ultimus WebClient/Ultimus Advanced Task Service (UATS) 2016, Ultimus further strengthens its unprecedented and long-standing position as the BPMS market's innovation leader.

After creating the first BPM suite, the groundbreaking Ultimus OrgChart, and the patented Adaptive Discovery (the first dynamic/ad-hoc process technology), Ultimus moved outside the scope of traditional BPM suites for its next major innovation – <u>WebClient/UATS</u> – in order to ensure performance, usability, and productivity of in-production business process solutions.
